

Prefabricated. Insulated. Built In House.

Sandwich panels and prefabricated structures for
defence, government and industry across India.

A Pioneer of **Prefab in India**

For close to two decades ACE has designed, manufactured, and erected prefabricated buildings for the clients who cannot afford them to fail. The armed forces, government departments, and industry across the country, served by one company that owns every step of the build.

Most companies in this trade are assemblers. They buy panels from one supplier, steel from another, and hire a crew to bolt it together on your site. When something does not fit, the blame travels down a chain of vendors nobody wants to own. ACE was built to be the opposite of that. We are a manufacturer first, and we keep design, fabrication, and erection inside the same company, so there is exactly one name on the structure and it is ours. That is how we earned pioneer standing in India's prefabricated building sector.

Four Things We Do Not **Compromise**

	What It Means for You
In House, End to End	Design, fabrication, and erection are all ours. No subcontracting, no middlemen, no gap for accountability to fall through.
Defence Approved	Cleared to supply the Indian Armed Forces and Ministry of Defence, with the documentation and discretion that demands.
Certified Quality	ISO 9001:2015 quality management, NABL accredited testing, and Eurofins fire certification behind every number we publish.
All Climate Engineering	Structures built for high altitude, snow, desert heat, high wind, and seismic zones, wherever the project actually sits.

The Panel **Range**

At the heart of everything we build is the insulated sandwich panel, pressed on a continuous line for the same performance on every panel. Three cores cover almost every requirement.

Panel	Character	Where It Fits
PIR	The premium foam core, lowest thermal loss, low smoke in fire	Deep freeze, cold storage, clean rooms, fire aware projects
PUF	The dependable workhorse, strong performance at a fair price	Cold rooms, chillers, insulated walls and roofs
Rockwool	The mineral core that does not burn, Class A1 rated	Fire barriers, flammable stores, acoustic walls

Full technical data for each panel is set out in our Sandwich Panel Technical Specifications document, available on request.

What the Panels Are *Used For*

The same panels solve very different problems depending on how they are specified and where they are put to work.

- **Heat insulation**, keeping conditioned space conditioned and cutting the energy a building loses through its walls and roof.
- **Cold rooms and cold storage**, holding a steady temperature from a gentle chill down to deep freeze.
- **Clean rooms**, giving pharmaceutical and precision industries the hygienic, sealed enclosure GMP work demands.
- **Fire insulation**, using non combustible Rockwool to separate fire compartments and buy time when it matters most.
- **Sound insulation**, cutting noise across walls and partitions where quiet is part of the specification.

Beyond *Panels*

Because the whole build is ours, we do not stop at the envelope. The same factory makes the structure it clads and the products that finish it.

Range	What We Make
Structural Systems	Pre engineered buildings, industrial warehouses, sheds, cold storage structures, and cottages.
Modular Infrastructure	Portable cabins, site offices, container structures, modular buildings, and portable restrooms.
Allied Products	UPVC doors and windows, FRP shelters and septic tanks, insulated water tanks, clean room doors, and powder coated panels.

Certified and *Approved*

A claim is only worth as much as the certificate behind it. Every performance figure ACE publishes is backed by an accreditation you can check, which is exactly why our defence and government clients trust the numbers on our documents.

- **ISO 9001:2015**, quality management
- **NABL**, accredited thermal testing
- **Eurofins**, fire certification
- **Bureau of Indian Standards**, compliant
- **Approved**, to supply the Indian Armed Forces and government departments

Who We *Build For*

Defence & Armed Forces	Accommodation, shelters, and buildings delivered with the documentation and discretion those projects require.
Government Departments	Structures for state and central projects, built to public procurement standards and public deadlines.
Cold Chain & Pharma	Cold storage, clean rooms, and controlled environments for operators who cannot lose a degree.
Industry & Manufacturing	Warehouses, sheds, and pre engineered buildings for factories that need floor space working fast.
Hospitality & Resorts	Cottages, cabins, and modular structures, often in exactly the remote settings prefab suits best.
Export Markets	The same engineered structures, packed and documented for projects overseas.

Talk to *Us*

Bring us your brief, a cold room, a warehouse, a full industrial facility, or a single specification query, and our team will come back with an approach, a timeline, and a budget. The conversation always starts the same way, with you telling us what you are building.
